**Subject:** NRDC/press question re MCHM/WW chems

Dan Rosenberg called me. A reporter called him and quoted ACC as saying that MCHM isn't a grandfathered chem, but was reviewed by EPA in the PMN program.

My recollection is that MCHM itself was on the original inventory, but that one of the other chems later revealed to be part of the mixture in the tank was a PMN. But I want to give Dan the straight story.

I know we've answered this question for the press. Could one of you please send me the info? Thanks. ÿ
